The MAILING DATE of this communication appears on the cover she t with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).  Status						
1)⊠	Responsive to communication(s) filed on <u>09 (</u>					
2a) <u></u> □	,	is action is non-final.				
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.						
Disposition of Claims						
· -	4)⊠ Claim(s) <u>1-31</u> is/are pending in the application.

Art Unit: 1641

## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-7, drawn to a method for screening for bioactivity of a candidate compound toward a group of related target proteins, classified in class 424, subclass 9.1.
  - II. Claims 8-10, drawn to a method for screening for bioactivity of a candidate compound toward a group of related target enzymes, classified in class 424, subclass 94.1.
  - III. Claims 11-16, drawn to a method for determining the presence of active target members of a group of related proteins, classified in class 435, subclass 7.8.
  - IV. Claims 17-18, drawn to a method for determining in a plurality of proteomic mixtures the presence of active target members of a group of related proteins, classified in class 436, subclass 161.
  - V. Claims 19-26, drawn to a method for determining the presence of active target members of a group of related enzymes, classified in class 424, subclass 94.6.
  - VI. Claim 27, drawn to a system for identifying active target proteins, classified in class 702, subclass 19.
  - VII. Claims 28-31, drawn to a system for determining the status of a biological system, classified in class 702, subclass 81.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions of group I-V and group VI-VII are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another and materially different apparatus such as ELISA or mass spectrometry.
- 3. Inventions of group I-II and group III-V are unrelated and independent inventions. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions as claimed have different effects. The feature of a candidate compound of group I-II is not required by the claims of the other groups. The feature of the presence of active target members of group III-V is not required by the claims of the other groups.
- 4. Inventions of group I and II are unrelated and independent inventions. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions as claimed have different functions. The feature of the probe characterized by a reactive functionality group and a ligand of group I is not

required by the claims of the other groups. The feature of providing specific affinity for enzymes of group II is not required by the claims of the other groups.

- Inventions of group III and IV are related as combination and subcombination.

  Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the step of analyzing for the presence of target members. The subcombination has separate utility such as capillary HPLC.
- 6. Inventions of group III-IV and group V are unrelated and independent inventions.

  Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions as claimed have different modes of operation. The feature of target members is conjugated to target members of group III-IV is not required by the claims of the other groups. The feature of the probe is conjugated to target member of group V is not required by the claims of the other groups.
- 7. Inventions of group VI and group VII are unrelated and independent inventions.

  Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP §

. .

806.04, MPEP § 808.01). In the instant case the different inventions as claimed have different modes of operation. The feature of a program for evaluating results of group VI is not required by the claims of the other groups. The feature of a program for producing a profile of group VII is not required by the claims of the other groups.

8. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter. The literature search required for Group I-II is not required for Group III-V, restriction for examination purposes as indicated is proper.

## Conclusion

- 9. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 10. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to My-Chau T. Tran whose telephone number is 703-305-6999. The examiner can normally be reached on M-F 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long V. Le can be reached on 703-305-3399. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-4242 for regular communications and 703-308-4242 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0196.
